(54) Title: METHOD FOR TREATING NEUROLOGICAL DISORDERS

**A**

**B**

(57) Abstract: The present invention is based on the discovery that suppressing the activity of the Nogo receptor (NgR) alone does not result in extensive axon regeneration unless the intrinsic growth program of neurons is also activated. Accordingly, the present invention is directed to methods of stimulating axon regeneration using a combination therapy wherein agents that inhibit NgR activity or downstream pathways activated by inhibitory signals are combined with agents that activate the growth pathway of neurons (e.g. polypeptide growth factors, activators of macrophages, purine nucleosides, or hexoses).
